# *Chemical Oceanography*

Where do the elements on the seawater come from?

1. Weathering of continents delivered to the oceans by rivers (also dust blown material)
2. Hydrothermal alteration of the oceanic crust
3. Volcanic degassing

# The oceans as a chemical system

Quelle: <http://www.meeresgeo-online.de/>

## Input:

rivers:  $18.3 \times 10^9$  tons/yr

Glaciers und ice:  $2.0 \times 10^9$  tons/yr

Wind (dust particles):  $0.6 \times 10^9$  tons/yr

Hydrothermal alteration of the oceanic crust

Volcanic degassing

## Discharge:

Sedimentation

**TABLE 1. COMPARISON OF RIVER WATER**

Ions	Average river water (mM/l)		Average sea water (mM/l)	
Hco <sub>3</sub> <sup>-</sup>	0.86	2.38	5.375	0.0044
So <sub>4</sub> <sup>-</sup>	0.069	28.2	0.43125	0.0517
Cl <sup>-</sup>	0.16	545	1	1
Ca <sup>2+</sup>	0.33	10.2	2.0625	0.0187
Mg <sup>2+</sup>	0.15	53.2	0.9375	0.09761
Na <sup>+</sup>	0.23	468	1.4375	0.8587
K <sup>+</sup>	0.03	10.2	0.1875	0.0187

 River water
 
 Sea water

## ■ Georg Forchhammer (1794-1865)

Danish Mineralogist

*“The quantity of different elements in seawater is not proportional to the quantity of elements which river water pours into the sea...”*

# Marine mass balances

## Source: Rivers

$$[\text{Mg}^{+2}]_R * 3.5 \times 10^{16} \text{ kg water yr}^{-1} \\ = \text{mmol Mg}^{+2} / \text{yr}$$

$$[\text{Mg}^{+2}]_R = 0.128 \text{ mmol/kg}$$

## Inventory: Ocean

$$[\text{Mg}^{+2}]_O * 1.38 \times 10^{21} \text{ kg water} \\ = \text{mmol Mg}^{+2}$$

$$[\text{Mg}^{+2}]_O = 52.8 \text{ mmol/kg}$$

## Sink: H.V. Systems

$$[\text{Mg}^{+2}]_O * 1 \times 10^{14} \text{ kg water yr}^{-1} \\ = \text{mmol Mg}^{+2} / \text{yr}$$

$$[\text{Mg}^{+2}]_{HV} = 0 \text{ mmol/kg}$$

# Marine mass balances

## Magnesium problem

<hr/>			
Supply of Mg <sup>2+</sup>	Rivers	1.3	<b>units: 10<sup>14</sup> g/yr</b>
	Total	1.3	
Removal of Mg <sup>2+</sup>	<b>1</b> Original budget*		Percentage river flux
	Carbonate formation	0.075	
	Ion exchange	0.097	
	Glauconite formation	0.039	
	Mg-Fe exchange	0.29	
	Burial of interstitial water	0.11	
	Subtotal	0.61	47
	<b>2</b> Modified budget		
	Hydrothermal activity	0.60	
	Subtotal	0.60	46
Total removal	1.21	93	

**Basalt-seawater interaction**

\* After Drever (1974).

# Residence times in seawater of solutes

Element	A Concentration in rivers ppm (ppm)	B Input to ocean from rivers (grams/yr)	C Concentration in ocean (ppm)	D Amount in ocean (grams)	E Residence time in ocean (years)
Cl	6	$2 \times 10^{14}$	19,350	$261 \times 10^{20}$	$130 \times 10^6$
Na	5	$2 \times 10^{14}$	10,760	$145 \times 10^{20}$	$72 \times 10^6$
SO <sub>4</sub>	8	$3 \times 10^{14}$	2,712	$37 \times 10^{20}$	$12 \times 10^6$
Mg	3	$1 \times 10^{14}$	1,294	$17 \times 10^{20}$	$17 \times 10^6$
Ca	13	$5 \times 10^{14}$	412	$6 \times 10^{20}$	$1 \times 10^6$
K	1	$0.3 \times 10^{14}$	399	$5 \times 10^{20}$	$16 \times 10^6$
HCO <sub>3</sub>	52	$20 \times 10^{14}$	145	$2 \times 10^{20}$	$0.1 \times 10^6$
Si	10	$4 \times 10^{14}$	0.5-10 (6)	$0.08 \times 10^{20}$	$.02 \times 10^6$ (20k)

B: River Input of element = Concentration in rivers x Amount of water flowing from rivers to oceans  

$$= A \times 0.374 \times 10^{20} \text{ grams/year}$$

D: Amount of element in oceans = Concentration in oceans x Amount of water in oceans  

$$= C \times 1.35 \times 10^{24} \text{ grams} / 10^6$$

E. Residence Time = Amount of element in ocean ÷ Rate of input from rivers  
 (i.e., how long it would take rivers to resupply oceans with their present mass of a given element)  

$$= D \div B$$

# The blue planet

## Where did the water in the oceans come from?

1. Earth held onto some water when it formed. Some of that water has remained with the Earth, and might be recycled through the planet's mantle layer.
2. delivered after Earth formed by ice-rich asteroids (carbonaceous chondrites) or comets.

# Example *Physical Oceanography*

depicts the shape of the seafloor and objects on it

Weather of Kiel at 13:12

Measuring Point Institute

Air temperature: 10,2°C

# Ocean bathymetry

Present-day Earth topography [m]

# Hypsometric curve

# The Oceans

Ocean	Surface Area (million km <sup>2</sup> )	Water Volume (million km <sup>3</sup> )	Avg. Depth (km)	Max. Depth (km)
Pacific	177	700	4.0	11.0
Atlantic	98	335	3.6	9.2
Indian	77	285	3.7	7.5
Arctic	15	15	1.1	5.2

Pacific ocean: less than double size, but more than double volume compared to the Atlantic ocean

# Continental Margins

## Continental Shelf

Submerged part of the continent  
Gently sloping (less than  $1^\circ$ )  
Up to 1500 km wide;  
averages 80 km wide  
Locally cut by *canyons*  
(eroded by rivers during  
the Ice age low sea level)

## Continental Slope

Boundary between continental and oceanic crust  
Steeply sloping compared to shelf (averages  
about  $5^\circ$  slope, up to  $25^\circ$ ); about 20 km wide

## Continental Rise

At base of continental slope; slope angle decreases  
Thick accumulation of sediment transported downslope from continental shelf

At mouths of submarine canyons, *deep-sea fans* are present.  
May be carved by turbidity currents - bottom-currents carrying suspended  
sediment downslope

# Submarine Canyons

Schelf und continental slope along California; source: USGS

## Submarine Canyons (“super-highways”)

cut into the seabed of the continental slope  
formation during lowstands of sea level

# Deep-sea fan

large-scale sediment deposition

sediments introduced through submarine canyons

formed by turbidity currents

examples: Amazonas fan; Bengal fan; Indus fan

# Deep Ocean Basins

## **Abyssal plains** (*Tiefseeboden*)

Flat, deep ocean floor

Depth may be 3 - 5 km

Sediments bury topography of oceanic crust

## **Deep sea trenches** (*Tiefseerinnen*)

The deepest part of the oceans

May exceed 10.000 m deep

Deepest is Mariana trench in Pacific Ocean (more than 11.000 m)

Occur at subduction zones where oceanic crust is forced downward into the mantle

## **Mid-ocean ridges**

continuous range of undersea mountains winding through 70.000 km of the world's oceans

## **Seamounts**

Undersea volcanic peaks which formed along mid-ocean ridges or over hot spots

May be eroded flat on top and called *guyots*

May be ringed by coral reefs called *atolls*
