HiWi Position
(Student assistant position (HiWi))

The Quantitative Biology Center offers a HiWi position (40 h/month) to assist in software development, starting as early as possible.

We offer interesting work in an interdisciplinary environment and the tasks are multi-faceted. You will mainly support QBiC’s IT infrastructure and scientific software development team, with a primary focus on portlet development. Portlets are modular software pieces, that run on a web-based portal environment (for example: Liferay), so with your work you will contribute to our production portal environment qPortal (http://qbic.life).

What you should bring:

- Experience in programming (Java, Python) and scripting
- Interest in rich internet applications
- Knowledge about Linux based systems and the ability to operate on them completely from command line environment
- Preferably familiar with or strong interest in software design patterns
- Preferably familiar with or strong interest in data base systems
- Knowledge or strong interest to work with Git, a version control system
- A good knowledge of English
- Creativity, reliability and self-reliance

Introduction to the systems and training about the technology used in it will be provided by our staff members.
