

Wintersemester 2017/18

**Oberseminar
Geometrische Analysis, Differentialgeometrie und Relativitätstheorie**

Am Donnerstag, den **01.02.2018** spricht um **14 Uhr c. t.** im Raum S6

Felix Dietrich
(Universität Tübingen)

über das Thema

Geometric Necks in Mean Curvature Flow

Geometric necks arise as singularities of 2-convex solutions to mean curvature flow in Euclidian space. We want to explain how to use the implicit function theorem to find a useful parametrization of these necks and how to follow this parametrization in time. Afterwards we talk about possible applications.

Hierzu wird herzlich eingeladen.

C. Cederbaum, G. Huisken
