

## Oberseminar

### Geometrische Analysis, Differentialgeometrie und Relativitätstheorie

Am Donnerstag, den **06.06.2024** spricht um **14 Uhr s.t.** im Raum **S9 (C6H05)** und über Zoom

**Fernanda Roing**  
(University of Turin)

über das Thema

#### Sharp pinching theorems for complete CMC hypersurfaces in the sphere

In this talk we prove that every complete minimally immersed hypersurface in the sphere, whose second fundamental satisfies a pinching condition, is either totally geodesic or a minimal Clifford torus, thereby extending a well-known result by Simons, Lawson and Chern, do Carmo & Kobayashi from compact to complete. We also extend the corresponding result for hypersurfaces with nonvanishing constant mean curvature, due to Alencar & do Carmo, to complete immersed CMC hypersurfaces, under the optimal bound for their umbilicity tensor. Our approach is inspired by the conformal method of Fischer-Colbrie and Catino, Mastrolia & Roncoroni. This is a joint work with Mari and Savas-Halilaj.

Den Zoom-Link erhalten Sie per E-Mail von Frau Martina Neu.
