# Integrating artificial intelligence tools into learning and teaching practices

## – Workshop –

This workshop invites the participants to explore the ways AI could support teaching and learning practices in higher education institutions. Facilitators share their experiences from Tallinn University, Estonia, along with general challenges and opportunities of AI integration to education. Participants are invited to contribute actively to discussions and try out some AI tools which could benefit the learning process. Therefore, participants should bring along their laptops to access the tools.

**Date:** March 18, 2024 (Monday)

**Time:** 14:00

**Duration:** 1h 30min

**Room:** 319 (Rümelinstr. 19-23)

**Halliki Põlda** is an associate professor of lifelong learning at Tallinn University. She is teaching and training on various topics related to the adult education field and is involved in the development of higher education and adult education professionals. Halliki has been researching talent and giftedness during the past 15 years and her own talent is considering different needs and talents of her learners in the learning process.

**Andrea Annus** is a junior research fellow at Tallinn University focused on researching how disruptive technologies (e.g. artificial intelligence) shape and change the social dimension of a learning space. She is teaching mostly on the bachelor level of the andragogy curriculum on adult education policy making, lifelong learning and social changes as well as research seminars.

Sponsored as part of the federal and regional excellence strategy.
