

Postdoc Position “PFAS Screening” in Environmental Analytical Chemistry (“Postdoc”) to be filled Oct. 1, 2024.

The group of Environmental Analytical Chemistry conducts research and provides education in Environmental Science with a focus on analysis, occurrence and fate of organic pollutants, in particular per- and polyfluoroalkyl substances (PFAS). We are looking for a highly motivated candidate who contributes to our current research and teaching and supervises our analytical laboratory.

The successful candidate holds a PhD (doctorate) and has a strong background in Environmental and Analytical Chemistry, as well as in LC-HRMS applications for PFAS. The applicant seriously pursues a career in academia and contributes to project funding and teaching.

Salary is based on TV-L E13 and employment takes place via the Central Administration of the University.

Please send your application with a detailed CV, a publication list, a statement of your research interests, and the names of two potential referees to:
