

Aspectual competition and Vendler's verb classes in iterative contexts in Polish

Eugen Kravchenko (SFB 833-C2, Universität Tübingen)

One of the most frequently discussed occurrences of aspectual competition within the Slavic languages is the competition between perfective and imperfective aspects in iterative contexts. This talk presents a corpus study on this topic based on the National Corpus of Polish Language and the Webcorpus Araneum Polonicum Maius. The results of the study were used for a judgment-experiment aimed at the research on acceptability of Vendler's verb classes (especially achievements and accomplishments) in combination with iterative quantifiers *dwa razy*, *wiele razy* and *dwa razy w tygodniu*.
