

Boundary conditions for external theses

- Theses in computer science, bioinformatics, media informatics, medical informatics, machine learning and computer science for education may be written outside of the department of Computer Science (= externally, e.g. within a company or other host institution) if a professor at the Computer Science department has agreed to supervise the thesis before the work on the thesis has started. There is no entitlement to do so.
- Theses are unpaid; Unusual expenses above and beyond what regular students at the University of Tübingen face, may be reimbursed upon presentation of receipts or other legal proof.
- Theses are published through the department library.
- The thesis will be supervised and assessed by at least one professor from the Computer Science department. For the assessment of externally completed theses, the host company/institution will have to provide an informal quality assessment 3 weeks after submission of the thesis at the latest.
- For theses completed externally, you and the host institution or company must accept these stipulations.
- The candidate must present a signed copy of this document to the Examinations Office when registering the thesis.

We confirm herewith that we acknowledge and will implement the above regulations.
