

**Oberseminar
Geometrische Analysis, Differentialgeometrie und Relativitätstheorie**

Donnerstag, 18. Juli 2024 im Raum **S9 (C06H05)** und über Zoom

14:15 – 15:15 Uhr Vortrag

Stephen Lynch
(Imperial College London)

Singularities in mean curvature flow

Abstract:

We will discuss the flow of hypersurfaces in 4-dimensional space by their mean curvature. Compared with the case of surfaces in 3-space, many interesting new phenomena arise. In particular, many new kinds of singularities are expected to arise, but have not yet been constructed rigorously.

15:15 -15:45 Uhr Kaffee im Hankelzimmer

15:50 – 16:50 Uhr Vortrag

Albachiara Cogo
(Universität Tübingen)

Maximal surfaces and boosts in the Schwarzschild spacetime

Abstract:

In Minkowski spacetime there is a one-to-one correspondence between observers, boosts and complete spacelike maximal (vanishing mean curvature) surfaces by the renowned Cheng-Yau Bernstein type theorem. We address the question whether there is a correspondent generalization of this idea in non-flat spacetimes, starting from the Schwarzschild spacetime. As a first step in this direction, we will prove the existence of a maximal surface approaching a coordinate-dependent hypersurface related to a boost of Minkowski in the asymptotically flat end and discuss some of its properties.
