Summer Semester 2026

Last updated on 13th April 2026

*Valid for the study and examination regulations of 2020.

Contents

1 Description of the Study Programme

1.1 Qualification Objectives

The aimof the Bachelor's degree programme in Mathematics is to qualify for professional roles in the economy (e.g., in banking, insurance, and management consulting) and in industry (e.g., in the area of simulation or interpretation of simulation results, as well as software development). Hence, graduates of the Bachelor's degree programme in Mathematics primarily find employment in industry, banks, insurance, and administrations, and to a limited extent in research institutes and universities. The fields of application are highly diverse: data processing, development and application of algebraic, analytical, geometric, numerical, and stochastic methods, solving optimisation problems, and modelling and simulation of complex issues. With the Bachelor's degree, graduates can deepen their knowledge and skills in a research-focused Master's degree programme in Mathematics (M.Sc. Mathematics or M.Sc. Mathematical Physics at Tübingen).

Subject-Specific Competencies

In the Bachelor of Science Mathematics, graduates acquire fundamental and initial advanced scientific knowledge and competencies. They are familiar with the fundamental issues in Linear Algebra, Analysis, Numerical Mathematics and Optimisation, Algebra, and Stochastics, providing them with a broad overview of the basic questions and methods in these areas of mathematics and enabling them to articulate their interrelationships. Graduates can identify problems with mathematical relevance and solve them using appropriate methods. They are capable of transferring the central techniques for solving mathematical situations and applying them in selected sub-areas. They gain initial modelling competences; starting from real problems, they learn to design a simplified mathematical model by reduction, develop solutions within the model, and interpret these solutions by referring back to the original question. Graduates gain abstraction skills and the ability to recognise analogies and fundamental patterns. They have acquired basic mathematical thinking patterns such as structuring problem statements, constructing chains of reasoning, and ultimately proving mathematical theorems. They are capable of conceptual, analytical, and logical thinking.

Transdisciplinary Competencies

Graduates of Mathematics are employable, due to their acquired analytical competencies, abstraction skills, and ability to solve complex problems across various practical fields (with heterogeneous demands). The curriculum is designed to develop these fundamental skills which are crucial for studying successfully. Especially in exercise classes and seminars, students practice their social communication skills (working in small groups, collaborative completion of exercises, and reviewing lecture material). They learn to create presentations and techniques to present them, practice logical and systematic argumentation and writing. These activities enhance their communication,

responsibility-taking, and teamwork skills. Graduates can recognise, classify, mathematically formulate, and solve problems with mathematical relevance from other areas of science and life. They can gather and interpret relevant information independently and in teams. They are capable of explaining their decisions and engaging in discussions about them. Graduates have developed high perseverance.

In addition to acquiring interdisciplinary skills in compulsory modules, the students expand their key qualifications through interdisciplinary courses on social topics, through specialised supplementary courses, which convey the application of specialised knowledge in everyday working life, through competence training for the targeted training of soft skills or through foreign language training.

1.2 Structure of the Study Programme

The first year of study is characterised by two major compulsory modules: Linear Algebra and Analysis, which provide the foundations of Mathematics from an academic point of view. These lectures are complemented by exercise classes where students receive intensive supervision and develop fundamental mathematical thinking and work methods, as well as the ability to present solutions. Additionally, students begin selecting their first modules for the section Elective Specialisation, typically drawn from teaching programmes in other departments. This non-mathematical area aims to acquire basic knowledge in other disciplines that utilise mathematics. The goal of the section Elective Specialisation is to provide ample opportunities, based on the student's interests and abilities, for differentiation alongside a solid mathematical foundation. Within the Elective Specialisation, modules totalling 33 ECTS credits can be chosen from the Department of Mathematics and other departments.

In the second year of study, students deepen their theoretical knowledge within the compulsory mathematics modules. They expand their knowledge in the areas of Algebra, Analysis, Numerical Mathematics and Optimisation, and Stochastics and take a introductory seminar.The content in the compulsory mathematics modules is taught through lectures and accompanying exercise classes. For each lecture there are weekly tasks, which students have to complete in paper form. In the exercise classes, the students present their solutions or create them under supervision. Through this system, which is common in mathematical study programmes, students learn to systematically work on the tasks set for them and to practise analytical and structural thinking. Furthermore, they should be able to explain complex mathematical matters and present them verbally. This requires students to be able to organise themselves and to do a lot of self-study, which is provided for and credited in the course of study. At the same time, intensive supervision and individual support options are provided.

Building on the compulsory area of mathematics, in their third year of study students choose courses from the modules in Section 3 Advanced Mathematics from the specialisations Algebra and Geometry, Analysis and Differential Geometry, Mathematical Physics, Numerical Mathematics and Optimisation, and Stochastics. In addition, they take further modules in the section Elective Specialisation as well as a seminar and complete their studies with the Bachelor's thesis. In the Bachelor's thesis, under the guidance of the supervisor, students are introduced to the independent development of a mathematical topic and, to a limited extent, to scientific writing. The latter is supported by the module *Working Techniques in Mathematics*, which is included as part of the Interdisciplinary Professional Competencies.

1.3 Study and Examination Plans, Mentors and Supervisors

To ensure that students make sense of their studies from the beginning and comply with all the rules, each student is assigned a mentor when they start the study programme. The student meets with this mentor at the start of the studies to create a personal study and examination plan that includes all the modules planned for the degree programme. The study and examination plan must be submitted to the head of the examination board for examination. In the following semesters, the student meets with their mentor at least once to adjust the study and examination plan. The adjusted study and examination plans must be resubmitted for approval. The role of mentor is initially assumed by a Faculty Course Advisor appointed by the faculty. In the transition from the second to the third year of study, this mentor is replaced by a personal mentor chosen by the student in consultation with the head of the examination board.

A reasonable time window for a study component at a foreign university should always be planned in a personal counselling meeting with the mentor. For the time abroad, the arrangement of a learning agreement also ensures that the achievements made at the other university can be incorporated into your own degree programme. Any semester is suitable for studying abroad, although the third year of study is usually particularly suitable for this, as the modules in this year are characterised by particular flexibility in terms of the courses that can be incorporated. The decision will depend individually on the student's previous achievements and the programme offered at the chosen foreign university. It is also possible to write the Bachelor's thesis during the stay abroad and under the co-supervision of a lecturer there.

2 Study Plans

2.1 Overview by Modules

Here we provide an overview of the study plan as a table showing the modules to be taken.

ST	Module Number	Module Title	Type of Course	Type of Module	Course-work	Type of Exam	ECTS-Points
Section 1: Foundations of Mathematics							
1+2	MAT-10-01	Analysis		PM		or.	18
		- Analysis 1	L+E+T		EC		
		- Analysis 2	L+E+T		EC		
1+2	MAT-10-02	Linear Algebra		PM		or.	18
		- Linear Algebra 1	L+E+T		EC		
		- Linear Algebra 2	L+E+T		EC		
Section 2: Compulsory Intermediate Modules							
3-4	MAT-20-01	Measure and Integration Theory	L+E	PM	EC	wr. o. or.	9
3-4	MAT-20-02	Introduction to Complex Analysis and Ordinary Differential Equations	L+E	PM	EC	wr. o. or.	9
3-4	MAT-20-03	Algebra	L+E	PM	EC	wr. o. or.	9
3-4	MAT-20-11	Numerical Mathematics	L+E	PM	EC	wr. o. or.	9
3-4	MAT-20-12	Stochastics	L+E	PM	EC	wr. o. or.	9
3-4	MAT-20-20	Introductory Seminar: Presentations in Mathematics	PS	PMW	s.M.	Pr	3
Section 3: Knowledge Expansion Mathematics							
5-6	MAT-30-01	Advanced Mathematics 1	L+E	PMW	EC	wr. o. or.	9
5-6	MAT-30-02	Advanced Mathematics 2	L+E	PMW	EC	wr. o. or.	9
6	MAT-30-03	Linking of Mathematical Areas	L+E	PMW	EC	wr. o. or.	9
5-6	MAT-30-10	Seminar: Talks on Advanced Topics in Mathematics	S	PMW	s.M.	Pr	3
Section 4: Elective Specialisation							
1-6		1 modul from the B.Sc. Computer Science (for details see below 3 Module Descriptions)		PMW			9

1-6		Modules in the study programmes of the department of Mathematics or of other departments (for details see below 3 Module Descriptions)		WPM			24
Section 5: Interdisciplinary Professional Competencies							
1-6		Modules providing interdisciplinary professional competencies, e.g. within the Transdisciplinary Course Programme (for details see 3 Module Descriptions)		WPM			15
1-6		Modules on democracy and the social constitutional state (for details see below 3 Module Descriptions)		WPM			3
2-4	MAT-00-10	Introduction to Scientific Programming	P+P	PMW	PC	none	3
2-6	MAT-00-20	Computer Science for Mathematicians	L+E	PM	EC	wr. o. or.	9
Section 6: Bachelor Thesis							
6	MAT-30-20	Bachelor Thesis	BT	PM		BT	12

Abbreviations:

Type of Module : PM=compulsory module, PMW=compulsory module with choice, WPM=elective module

Examination Type : BT=bachelor's thesis, or.=oral exam, wr.=written exam, Pr=presentation, E=essay, P=portfolio, T=continous assessment tests

Teaching Format : L=lecture, LE=lecture with integrated exercises, SL=seminar or lecture, E=exercise class, T=revision course, P=practical course, PS=introductory seminar, S=seminar, IC=inverted classroom

Course Work : EC=exercise certificate, PEC=practical exercise certificate, PC=practical certificate

Other : h=hours, o.=or, s.M.=see module description, ST=suggested term

Note at the request of the student representatives on the Study Commission: For modules extending over several semesters, it is strongly recommended to review the content of each submodule thoroughly during the lecture-free periods, thereby spreading the preparation for the oral examination over a longer period of time.

2.2 Overview by the Course of Studies

Firstly, we provide an overview of the possible course of study in the form of a table both for entry in the winter semester and for entry in the summer semester. The section Elective Specialisation and the section Interdisciplinary Professional Competencies are not broken down in detail. Finally, we provide some possible courses of study with examples of compulsory modules with options and compulsory elective modules.

Study Plan for Students Starting in the Winter Semester

FS	CP	Core Area Mathematics			ES	IPC
1	30	Analysis (18 CP)		Linear Algebra (18 CP)	Specialisation	plinary Professional Competencies
2	30					
3	30	Measure and Integration Theory (9 CP)	Numerical Mathematics (9 CP)	Introductory seminar (3 CP)		
4	30	Introduction to Complex Analysis and Ordinary Differential Equations (9 CP)	Stochastics (9 CP)	Algebra (9 CP)	Elective (33 CP)	Interdisci- (21 CP)
5	30	Advanced Mathematics 1 (9 CP)	Advanced Mathematics 2 (9 CP)	Seminar (3 CP)		
6	30	Networking of Mathematical Areas (9 CP)	Bachelor Thesis (12 CP)

3 Module Descriptions

Section 1: Foundations of Mathematics

Module Number: **MAT-10-01**	**Module Title:** Analysis		**Type of Module:** Compulsory Module
ECTS-Points	18		
Workload **- Time in Class** **- Self-Study**	Workload: 540 h	Time in Class: 180 h	Self-Study: 360 h
Duration	2 Semester		
Frequency	every Semester		
Term	1+2		
Language of Instruction	German		
Forms of Teaching and Learning	1. Semester: Analysis 1, Lecture 4 SWS + Ex.cl. 2 SWS + Rev.c. 2 SWS 2. Semester: Analysis 2, Lecture 4 SWS + Ex.cl. 2 SWS + Rev.c. 2 SWS		
Higher Objectives	In the Analysis module, students learn the essential content-related and methodological foundations of single-variable and multivariable calculus in their interconnected context. Particular emphasis is placed on the similarities and differences in approach. In the oral examination, students demonstrate that they have recognised these connections and are capable of integrating the central results of the lectures into these frameworks. The duration of the module not only supports these objectives but also facilitates the acquisition of a new language - the language of mathematics - and the development of a precise, strictly logical approach to problem-solving. This allows students the necessary time to make the significant transition from school-level mathematics to university-level mathematics. With the deeper and integrated understanding demonstrated in the oral examinations, the foundation is laid for successful participation in all advanced modules throughout their studies.		

Content

- Basic logic and sets.
- Structure of real and complex numbers.
- Sequences, convergence and series; criteria for convergence; power series, sequences of functions; pointwise and uniform covergence.
- Continous functions in one dimension and between metric spaces and their properties.
- One- and multidimensional differential calculus (especially: intermediate value theorem, Taylor expansion, implicit function theorem, inverse function theorem, extrema under constraints).
- One- and multidimensional Riemann integral (especially Fubini's theorem, transformation formula).
- Basic concepts of topology in metric and normed spaces.
- Basic concepts of the theory of ordinary differential equations (Picard-Lindelöf theorem, linear ordinary differential equations, flows).
- The lecture Analysis 1 focuses predominately on contents from one-dimensional analysis, the lecture Analysis 2 on multidimensional analysis.

Objectives

The students know and understand the fundamental concepts, principles, and methods of single-variable and multivariable calculus. They have also developed a basic awareness of problems related to ordinary differential equations and initial value problems.
Their capacity for abstraction has been enhanced, they have been trained in analytical thinking, and their mathematical creativity has been stimulated. Through a proof- and structure-oriented approach, they have learned to follow mathematical proofs in calculus and independently prove or disprove mathematical statements in simple examples. They have recognised the essential connections within the theory of single-variable and multivariable calculus, understanding their similarities and differences, and are able to situate the central statements of the lectures within these contexts.
In the exercises, they have acquired a confident, precise, and independent handling of the concepts, principles, and methods introduced in the lectures. Furthermore, their presentation and communication skills have been developed through written assignments and presenting their own solutions. The students are capable of acquiring knowledge through self-study, and their teamwork skills have been strengthened through collaborative work in small groups.

Requirements for obtaining Credits / Grading (Weighting if applicable)

Title	Type of Course	Status	SWS	ECTS	Coursework	Type of Exam	Dur. of Exam (min)	Grading	Weight for Grade
Analysis 1	L	o	4	6	yes	or.	20-30	g	100
	E	o	2	3					
	T	o	2	0					
Analysis 2	L	o	4	6	yes				
	E	o	2	3					
	T	o	2	0					

In both parts of the module an exercise certificate is to be acquired as coursework. The exercise certificate is acquired after regular participation in the exercise classes by taking part in a written test. Both partial assessments must be completed in the same semester.

For taking the oral exam at least one of the two exercise certificates has to be acquired. The module is finished only if both exercise certificates have been acquired and the oral exam is passed.

ECTS-Points	18		
Workload **- Time in Class** **- Self-Study**	Workload: 540 h	Time in Class: 180 h	Self-Study: 360 h
Duration	2 Semester		
Frequency	every Semester		
Term	1+2		
Language of Instruction	German		
Forms of Teaching and Learning	1. Semester: Linear Algebra 1, Lecture 4 SWS + Ex.cl. 2 SWS + Rev.c. 2 SWS 2. Semester: Linear Algebra 2, Lecture 4 SWS + Ex.cl. 2 SWS + Rev.c. 2 SWS		
Higher Objectives	In the Linear Algebra module, students learn the essential conceptual and methodological foundations of Linear and Multilinear Algebra, with a particular focus on their interconnections, similarities, and synergies. In the oral examination, students demonstrate that they have recognised these relationships and are capable of situating the core results of the lectures within these contexts. The duration of the module not only supports these objectives but also accounts for the acquisition of a new language - the language of mathematics - and the development of a precise and rigorously logical working methodology. This allows students the necessary time to make the significant transition from school-level mathematics to university-level mathematics. By showcasing deeper and integrated understanding during the oral examinations, students lay the foundation for successful participation in all subsequent modules of their academic programme.		
Content	• Basic algebraic concepts (groups, rings, fields, symmetric group, polynomial ring). • Vector spaces and linear maps. • Matrices and systems of linear equations. • Determinants, eigenvalues and diagonalizability. • Jordan canonical form. • Euclidean and unitary vector spaces, spectral theorems. • Bilinear forms and multilinear algebra (tensor product, exterior product). • Additionally a selection of the following topics will be covered: – Rational normal form and elementary divisors. – Beginning of divisibility theory in rings (euclidean rings, principle ideal rings, factorial rings). – Basic concepts of modules (torsion module, finitely generated modules, abelian groups). – Modules over euclidean rings (Hermite normal form, Smith normal form, structure theorems). – Finitely generated modules over principle ideal rings. – Normal divisors, factor group, Lagrange's theorem, group homomorphisms. – Analytical geometry, classification of conic sections.		

Objectives

The students are familiar with and understand the fundamental concepts, statements, and methods of Linear Algebra. Their capacity for abstraction has been enhanced, they have developed analytical thinking skills, and their mathematical imagination has been stimulated. Through a proof- and structure-oriented approach, they have learned to comprehend mathematical proofs in Linear Algebra and independently prove or disprove mathematical statements in simple examples. They have recognised the essential interrelations in the theory of Linear and Multilinear Algebra, particularly their structural similarities, and are able to contextualise the core content of the lectures within these frameworks.
In the exercises, they have developed a confident, precise, and independent approach to the concepts, statements, and methods covered in the lectures. Additionally, their presentation and communication skills have been cultivated through written work and presenting their own solutions. The students are capable of acquiring knowledge through self-study, while their teamwork abilities have been fostered through collaboration in small groups.

Requirements for obtaining Credits / Grading (Weighting if applicable)

Title	Type of Course	Status	SWS	ECTS	Coursework	Type of Exam	Dur. of Exam (min)	Grading	Weight for Grade
Linear Algebra 1	L	o	4	6	yes	or.	20-30	g	100

Module Number: **MAT-20-02**	**Module Title:** Introduction to Complex Analysis and Ordinary Differential Equations		**Type of Module:** Compulsory Module
ECTS-Points	9		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Duration	1 Semester		
Frequency	regularly in Summer Semester		
Term	3-4		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS + Ex.cl. 2 SWS		
Content	• Complex Analysis: – Holomorphic functions, Cauchy-Riemann equations. – Antiderivatives, Cauchy's integral formula, Cauchy's integral theorem. – Compact convergence of families of functions, formal and convergent power series, complex-analytical functions, identity theorem. – Liouville's theorem, inverse function theorem for holomorphic functions, open mapping theorem, maximum principle. – Laurent series, holomorphic functions with isolated singularities, Casorati-Weierstrass theorem. – Residue theorem and applications. • Ordinary differential equations, a choice of the following: – Picard-Lindelöf existence and uniqueness theorem. – Linear ordinary differential equations, Gronwall's lemma. – Continous dependence on initial conditions, differential dependence on initial conditions. – Basics of dynamical systems, stability of equilibrium positions, characteristic exponents, first integrals, Liapunov-functions. – Ordinary differential equations over the complex numbers. – Regularity, the criterion of Fuchs. – The method of Frobenius.		
Objectives	The students know the foundations of the theory of complex analysis and ordinary differential equations. The are acquainted to essential calculation techniques and can calculate line integrals as well as explicitly solve simple differential equations. They know fundamental applications of the theory like e.g. the fundamental theorem of algebra and the Newtonian equations of motion. They also have the ability to transfer abstract questions into concrete problems of complex analysis or respectively of ordinary differential equations and solve them this way. In the exercise classes they have acquired a confident, precise and independent handling of the terms, statements and methods of the lecture. Furthermore the presentation and communication skills of the students was trained by written assignments and presenting their own solutions. The students are capable of adopting knowledge by self-study and at the same time their capacity for teamwork was enhanced by working in small groups.

Introductory Seminar	PS	o	2	3	yes	Pr	60-90	g	100

The acquisition of the credit points requires alongside with a successfull presentation the regular active participation in the course, like by asking questions, contributing to a discussion or working on problem tasks. Additionally a written elaboration of the own talk or the issue of a handout for the participants may be required. This further work constitutes the coursework of the module.

Transfer	The module Introductory Seminar Presentation in Mathematics is a prerequisite for all seminar moduls in mathematics.
Prerequisites	At least one of the exercise certificates from each of the modules Analysis and Linear Algbra must have been acquired.
Responsible Persons	The dean of studies at the Department of Mathematics

Section 3: Knowledge Expansion Mathematics

For the modules listed below in the section of Knowledge Extension Mathematics, there is some flexibility regarding the choice of courses to be attended. When selecting courses within a module, it is not permitted to choose courses that have already been credited to another module of this programme. Additionally, courses with significant overlaps in content and competencies to be acquired must also be avoided. In case of doubt, the examination board makes the final decision. Therefore, students are advised to consult the head of the examination board before attending a course to clarify whether the course can be included, especially if there is any uncertainty regarding possible overlaps.

Module Number: **MAT-30-03**	**Module Title:** Linking of Mathematical Areas		**Type of Module:** Compulsory Module with Choice
ECTS-Points	9		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Duration	1 Semester		
Frequency	every Semester		
Term	6		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS + Ex.cl. 2 SWS		
Comment	The module builds on one of the two modules Advanced Mathematis 1 or Advanced Mathematics 2. A course must be selected from the catalogue of courses in Section 4.1 of the module handbook, comprising 4 contact hours per week as a lecture and 2 contact hours per week as exercises. The course of this module and that of the corresponding module Advanced Mathematics, to which it is linked, should either build on each other to allow a deeper integration of content and methods, or belong to different areas of mathematics that have clear connections, enabling a broader integration of content and methods. Possible combinations are listed separately in the module handbook. In cases of in-depth integration, it is generally expected that a course from the catalogue in 4.1 will be combined with an advanced course from the first year of a consecutive Master's programme. The approval of additional courses or alternative course formats (e.g., two courses, each with 2 contact hours per week as a lecture and 1 contact hour per week as exercises) is at the discretion of the head of the examination board, based on a written request submitted by the student.		
Higher Objectives	Mathematical theories and important mathematical results are not isolated and independent on their own, they live from the links and connections with other mathematical theories and continuative results. Getting to know the interconnections leads to a deepened understanding of the original question and often opens up new tool boxes and approaches for the analysis and solution of the question. The module should allow the students this experience on a still simple level.		
Content	The content is determined by the choice of a course.		
Objectives	The students have deepened knowledge in a branch of mathematics or extended knowledge in two different branches of mathematics, who are explicitly linked with each other. They have learned to independently peform scientific work and have acquired further experience in the presentation and expanation of mathematical topics. They are capable of naming and proving the central results of the lecture as well as assessing and explaining the presented connections. Furthermore they have seen and elaborated the links and connections of contents and methods of the course with the course of the corresponding module Advanced Mathematics. Therefore they got a new view and a deeper understanding of the results of each single course. In the exercise classes they have acquired a confident, precise and independent handling of the terms, statements and methods of the lecture. They have learned to transfer the methods to new problems, to analyse them and to work on solution strategies on their own or in a team.

Section 4: Elective Specialisation

In the Elective Specialisation, modules from the bachelor's programmes and, in the 3rd year of study, also from the master's programmes in the departments of Biology, Chemistry, Geosciences, Computer Science, Mathematics, Philosophy - Rhetoric - Media, History, Physics, Psychology, and Economics can be included. If there are agreements with the departments regarding course imports for the Bachelor of Science in Mathematics, these should be considered in their current form. The examination board will decide on the admission of modules from other programmes based upon a written request of the student.

The Department of Mathematics itself offers the modules listed below for this section. If there is flexibility in the courses to be selected within a module, no courses that have already been included in another module of this programme or that have significant content and competence overlaps with such courses may be chosen.

However, if graded modules are included, the grade will not be counted towards the final grade for the Bachelor of Science in Mathematics.

Section 5: Interdisciplinary Professional Competencies

For the acquisition of credit points in the section Interdisciplinary Professional Competencies the regulations for obtaining interdisciplinary and career-related competencies (Transdisciplinary Course Programme) for bachelor's programmes at the University of Tübingen in their current form apply. All permissible modules from the teaching programme of other departments and the Transdisciplinary Course Programme can be included.

The modules MAT-00-10 Introduction to Scientific Programming and MAT-00-20 Computer Science for Mathematicians are mandatory modules, with some flexibility regarding the interchangeability and inclusion of the Computer Science for Mathematicians module (see the comment in the module description). Additionally, the Department of Mathematics offers the modules listed below for this section. If the included modules are graded, the grade will not, however, be counted towards the final grade for the Bachelor of Science in Mathematics.

Module Number: **MAT-00-10**	**Module Title:** Introduction to Scientific Programming		**Type of Module:** Compulsory Module with Choice
ECTS-Points	3		
Workload **- Time in Class** **- Self-Study**	Workload: 90 h	Time in Class: 60 h	Self-Study: 30 h
Duration	2 Semester		
Frequency	every Semester		
Term	2-4		
Language of Instruction	German		
Forms of Teaching and Learning	• Software Lab, Practical course 2 SWS • Numerical Mathematics Lab, Practical course 2 SWS		
Content	• Software lab: – Introduction to one or several mathematical software packages. – Introduction of the basic elements of programming and of basic data structurs. – Implemantation of simple algorithms, e.g. in linear algebra, in a typical mathematical software package. • Numerical mathematics lab: – Introduction to Matlab or a similar complex computer algebra system. – Implementation of the essential algorithms which are discussed in the course on numerical mathematics.		
Objectives	The students are familiar with several subject specific software packages or computer algebra systems. They are trained to algorithmically elaborate selected problems, e.g. of linear algebra and numerical mathematics, and to implement the algorithms into subject specific software packages. Thereby, they have broadend and deepened the algorithmic competences gained in the modules of the Section Foundations of Mathematics and in further modules. Moreover, they have been introduced to the basic elements of programming and the basic data structures in applications.		

Requirements for obtaining Credits / Grading (Weighting if applicable)

Title	Type of Course	Status	SWS	ECTS	Coursework	Type of Exam	Dur. of Exam (min)	Grading	Weight for Grade
Software Lab	P	o	2	1,5	yes	none	-	ng	-
Numerical Mathematics Lab	P	o	2	1,5	yes	none	-	ng	-

In the courses of this module compulsory coursework will be required. This may encompass programming projects. The module finishes without an exam.

Module Number: MAT-00-12	**Module Title:** Internship Mathematics		**Type of Module:** Elective Module
ECTS-Points	9		
Workload - Time in Class - Self-Study	Workload: 270 h	Time in Class: 30 h	Self-Study: 240 h
Duration	1 Semester		
Frequency	not regularly		
Term	5-6		
Language of Instruction	German		
Forms of Teaching and Learning	Collaborative project work		
Comment	The module coordinator can be contacted to find out whether a specialised internship is offered in a semester and, if so, by which lecturers. With the approval of the head of the examination board, the specialised internship can also be completed externally in an industrial company or research institution and should then have a duration of approximately seven weeks full-time. In terms of content and the coursework to be completed, the specialised internship may then deviate from the requirements. However, it must be ensured that there is a clear mathematical reference, such that the competence objectives of the module can be achieved with the internship and that supervision of the internship is guaranteed both by the external partner and by a member of the faculty at the department.		
Content	Using a selected topic as an example, a problem with a substantial connection to mathematics or a mathematical issue is to be solved practically using subject-specific software and, if necessary, implemented in the form of a programme / programme package. This means that the realisation of the project should be planned, carried out and concluded with a presentation after the subject matter has been worked out largely independently. The internship topic should take into account the students' different previous courses, which is based on the fact that different individual choices were made in the compulsory and compulsory elective modules of the second year of study. If possible, an individual project should be worked on jointly by two to three students. The realisation of the project is accompanied by the development of the necessary basics in soft skills (such as project planning and team management).		
Objectives	Students have learned to analyse and implement a mathematical task or a mathematical issue with a view to practical feasibility, including the creation of a schedule and the definition of milestones. They will be able to use specialised software in a targeted manner and, if necessary, carry out a self-contained software project, including the creation of complete documentation and final validation of project planning, team management and presentation of the finished product		

Requirements for obtaining Credits / Grading (Weighting if applicable)

Title	Type of Course	Status	SWS	ECTS	Coursework	Type of Exam	Dur. of Exam (min)	Grading	Weight for Grade
Internship Mathematics	P	f	-	9	yes	none	-	ng	-

As part of the module, a programme / programme package including complete documentation must generally be created and the product of the internship must be presented in a presentation at the end. Alternative internship achievements are also possible, especially in the case of externally organised internships. The work completed is a coursework. The module concludes without an examination.
The specialised internship can also be completed in a shortened form. In this case, the number of credit points is based on the actual workload. A scope of 3 to 9 ECTS is permissible.

Transfer	The module Internship Mathematics offers the students a first insight into possible occupational fields for mathematics graduates. They learn how the competences acquired in the study find application in a company or in the scope of an internal software project.
Prerequisites	Subject related admission requirement for the module Internship Mathematics is the acquisition of the credit points from the modules of the Sections 1 Foundations of Mathematics as well as at least 30 credit points from the modules of the Sections 2 and 3.
Responsible Persons	The dean of studies at the Department of Mathematics

<tr><td>Language of Instruction</td><td colspan="3">German</td></tr>
<tr><td>Forms of Teaching and Learning</td><td colspan="3">Seminar, mentoring</td></tr>
<tr><td>Content</td><td colspan="3">Studying mathematics confronts students with challenges, especially at the beginning of their degree programme. They have to work through content and tasks largely independently and learn subject-specific working techniques. Mentors help in this situation: students from higher semesters who support first-year students in making contacts, organising their self-study appropriately and teaching them work techniques using the principle of minimal help.
Training is offered for the mentoring role. In the three sessions, the following topics are covered:
Roles of the mentor;
Areas of mentoring in the degree programme;
Boundaries of the mentoring relationship;
Subject-specific challenges when starting a degree programme in mathematics;
Abstraction and visualisation;
Networking of knowledge;
Principle of minimal help.</td></tr>
<tr><td>Objectives</td><td colspan="3">Students know the tasks and limits of mentoring. They know the subject-specific challenges of starting a degree programme and are able to support the new students. They are also able to apply the principle of minimal help.</td></tr>
<tr><td>Requirements for obtaining Credits / Grading (Weighting if applicable)</td><td colspan="3"><table>
<tr><th>Title</th><th>Type of Course</th><th>Status</th><th>SWS</th><th>ECTS</th><th>Coursework</th><th>Type of Exam</th><th>Dur. of Exam (min)</th><th>Grading</th><th>Weight for Grade</th></tr>
<tr><td>Mentoring in Mathematics</td><td>S</td><td>f</td><td>-</td><td>1</td><td>yes</td><td>none</td><td>-</td><td>ng</td><td>-</td></tr>
</table>Prerequisites for the acquisition of credit points are active participation in the mentoring programme as well as participation in the mentor training and a reflection report.
The module can also be carried out in an extended form over several semesters. In this case, the number of credit points is based on the actual workload resulting from the scope of the mentoring activity. A scope of 1 to 3 ECTS is permissible.</td></tr>
<tr><td>Transfer</td><td colspan="3">-</td></tr>
<tr><td>Prerequisites</td><td colspan="3">The module is aimed at students from the 3rd semester onwards in a undergraduate degree programme in mathematics.</td></tr>

Module Number: MAT-00-19	**Module Title:** International Mathematics Competition Training		**Type of Module:** Elective Module
ECTS-Points	2		
Workload - Time in Class - Self-Study	Workload: 90 h	Time in Class: 30 h	Self-Study: 60 h
Duration	1 Semester		
Frequency	every Semester		
Term	1-6		
Language of Instruction	German or English		
Forms of Teaching and Learning	Presentation, group work, blended learning, practical exercises		
Content	In this course, standard tools from different areas of mathematics that are often used to solve problems in mathematical competitions, such as the International Mathematics Competition for University Students (IMC). The topics covered include inequalities, analysis, matrix analysis, convex geometry, linear algebra, probability theory, combinatorics and group theory. The content and methods covered go beyond the standard curriculum of the courses in a B.Sc. in Mathematics and can be used to simplify the solution of problems, that have appeared in previous editions of the IMC. As part of the course, mock exams will also be conducted in order to practise the format of the IMC exams.		
Objectives	The students have acquired the most common tools from various different areas of mathematics in order to solve many problems in various mathematical competitions, such as the International Mathematics Competition.

Module Number: MAT-00-20	**Module Title:** Computer Science for Mathematicians		**Type of Module:** Compulsory Module
ECTS-Points	9		
Workload - Time in Class - Self-Study	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Duration	1 Semester		
Frequency	not regularly, in Winter or Summer Semester		
Term	2-6		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS + Ex.cl. 2 SWS		
Comment	The mandatory module Computer Science for Mathematicians can be substituted by modules from the Department of Computer Science, as long as they are comparable with respect to the competences obtained; in particular it can be replaced by the following modules from the Bachelor of Science Computer Science: • INFM1110 Computer Science 1, • INFM1120 Computer Science 2, • INFM2420 Algorithms/Computer Science 3, • INFM2410 Theoretical Computer Science/Computer Science 4. In addition, the compulsory module Computer Science for Mathematicians or the modules that replace it can also be included in the Elective Specialisation section. In the latter case, in addition to the module Introduction to Scientific Programming, modules totalling 18 credit points from the university's range of modules in the area of Interdisciplinary Professional Competences must be completed in the Interdisciplinary Professional Competences section. Students who intend to focus on Computer Science in the Elective Specialisation and take several Computer Science modules are strongly recommended to replace the Computer Science for Mathematicians module with one of the above-mentioned modules, as some of these are prerequisites for attending further modules in the Computer Science degree programmes.		
Content	• Theoretical and practical foundations of computer science. • Elements of programming. • Elementary data types. • Simple data structures and algorithms. • Runtime and memory space, complexity. • Formal languages. • Foundations of object-oriented programming.		

Objectives

Students have learnt the basic structure of a computer. They know elementary data types and their representations and are familiar with the basics of programming. They know simple data structures and algorithms and can apply them in practice. Students can analyse programmes for runtime and memory requirements and are familiar with simple complexity classes. They are familiar with the concept of object orientation and can use it to design a programme. They complement the practical skills acquired in the practical courses of the Introduction to Scientific Programming module with the necessary theoretical foundations.
In the exercises, they have acquired a confident, precise and independent handling of the concepts, statements and methods from the lectures and gained practical experience in the implementation of algorithms. In addition, the students' presentation and communication skills were trained through written work and presenting their own solutions. The students are able to acquire knowledge through self-study and at the same time their ability to work in a team was promoted by working in smaller groups.

Requirements for obtaining Credits / Grading (Weighting if applicable)

Title	Type of Course	Status	SWS	ECTS	Coursework	Type of Exam	Dur. of Exam (min)	Grading	Weight for Grade
Computer Science for Mathematicians	L	o	4	6	yes	wr. o. or.	90-180 o. 20-30	g	100
	E	o	2	3					

In this module an exercise certificate is to be acquired as coursework. For participation in the examination the coursework must have been acquired. Whether the examination is written or oral is decided by the instructor with approval by the head of the examination board.

Grading System	: g=graded, ng=not graded
Examination Type	: BT=bachelor's thesis, or.=oral exam, wr.=written exam, Pr=presentation, E=essay, P=portfolio, T=continous assessment tests
Teaching Format	: L=lecture, LE=lecture with integrated exercises, SL=seminar or lecture, E=exercise class, T=revision course, P=practical course, PS=introductory seminar, S=seminar, IC=inverted classroom
Status	: o=obligatory, f=facultative
Other	: h=hours, o.=or, s.M.=see module description, SWS=contact hours per week

4 Courses for Compulsory Modules with Choice in Section 3 and 4

4.1 Catalogue of Courses

The following lists the courses that can be included in the compulsory modules with optional choices in Section 3 and Section 4. Additional courses can be approved upon written application to the head of the examination board.

Course Title:	Algebraic Topology 1		
Specialisation	Geometry		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	not regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	• Set theoretical topology. • Basic concepts of category theory. • The fundamental group of a punctured topological space. • Theory of covering spaces. • Basic concepts of singular homology theory. • Applications.		
Special Objectives	The students learn how to realise ideas in topology, e.g. the detection of holes in topological spaces, into a precise theory, even with a sophisticated technique. In particular, they recognise how abstract concepts, e.g. from category theory and homological algebra, provide effective ways of speaking that enable the formation of ideas to be adequately implemented.		
Literature	**Possible References :** • Allen Hatcher: Algebraic topology. Cambridge University Press 2009. • Horst Schubert: Topologie. Teubner 1971. • Edwin H. Spanier: Algebraic topology. McGraw-Hill 1966. • Ralph Stöcker, Heiner Zieschang: Algebraische Topologie. Teubner 1994.		
Responsible Persons	Anton Deitmar, Frank Loose		

Course Title:	Algorithms of Numerical Mathematics		
Specialisation	Scientific Computing		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		

Content	Advanced, important algorithms of numerics (without differential equations) such as: • Fast Fourier transformation; • QR algorithms for the calulation of eigenvalues; • Method of conjugated gradients and more general Krylov space methods as iterative methods in numeric linear algebra and in non-linear optimisation; • Simplex method and interior point methods in linear optimisation.
Special Objectives	The students have learned the key concepts, results, and methods of algorithmic numerical mathematics.
Literature	**Possible References :** • Peter Deuflhard, Andreas Hohmann: Numerische Mathematik 1. De Gruyter 2008. • Martin Hanke-Bourgeois: Grundlagen der Numerischen Mathematik und des Wissenschaftlichen Rechnens. Vieweg 2009.
Responsible Persons	Christian Lubich, Andreas Prohl

Course Title:	Introduction to Mathematical Logic		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 90 h	Time in Class: 30 h	Self-Study: 60 h
Frequency	not regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 2 SWS		
Content	• Propositional logic. • Languages of the first order: – Completeness and compactness. • Theory of computations: – Register machines; – Gödelisation. • Incompleteness of arithmetic: – First and second incompleteness theorem. • Set theory: – Ordinal- and cardinal numbers; – Incompleteness of set theory.		
Special Objectives	Students are able to understand mathematical theorems and theories in the context of mathematical logic. They understand the limits of possible mathematical knowledge, recognise the difference between truth and provability and can apply basic theoretical model thinking to mathematical content.		

Literature	**Possible References :** • Rautenberg, Wolfgang: Einführung in die Mathematische Logik. Vieweg+Teubner 2008. • Ziegler, Martin: Mathematische Logik. Birkhäuser 2016.
Responsible Persons	Anton Deitmar

Course Title:	Introduction to set theory		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 90 h	Time in Class: 30 h	Self-Study: 60 h
Frequency	not regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 2 SWS		
Content	**Content:** •		
Special Objectives	-		
Literature	**Possible References :** •		
Responsible Persons	Frank Loose		

Course Title:	Introduction to Optimisation		
Specialisation	Scientific Computing		
Workload **- Time in Class** **- Self-Study**	Workload: 180 h	Time in Class: 60 h	Self-Study: 120 h
Frequency	not regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 3 SWS + Exercise class 1 SWS		

Content	• Optimality theory for smooth, convex and linear optimisation problems optimisation problems with constraints. • Foundations of the theory of convex sets and functions. • Duality theory for convex and linear optimisation problems. • Solution methods for linear optimisation problems.
Special Objectives	Students know and understand methods and algorithms for solving convex and linear optimisation problems. They have learnt to apply the methods to simple problems related to economics, technology or physics. They will be able to critically assess the possibilities and limitations of using the methods.
Literature	**Possible References :** • Florian Jarre, Joseph Stoer: Optimierung: Einführung in mathematische Theorie und Methoden. Springer 2019. • Jorge Nocedal, Stephen J. Wright: Numerical optimization. Springer 2006.
Responsible Persons	Christian Lubich

Course Title:	Introduction to Dynamical Systems		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 90 h	Time in Class: 30 h	Self-Study: 60 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 2 SWS		
Content	• Kepler's laws. • Equilibrium positions. • Stability. • Predator-prey model. • Poincaré-Bendixson theorem. • Limit sets. • Periodic orbits. • Celestial mechanics.		
Special Objectives	The students can ask and examine qualitative questions about the solutions of ordinary differential equations, like e.g.: How long do mathematical solutions exist? Are there equilibrium states or periodic orbits? When are trajectories stable?		

Literature	**Possible References :** • Morris W. Hirsch, Stephen Smale: Differential equations, dynamical systems, and linear algebra. Academic Press 1974. • Vladimir I. Arnold: Mathematical methods of classical mechanics. Springer 2010. • Carl Ludwig Siegel, Jürgen Moser: Lectures on celestial mechanics. Springer 1995.
Responsible Persons	Frank Loose

Course Title:	Introduction to Geometric Measure Theory		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	• Measures, covering theorems, differentiation of measures, Hausdorff measures and densities. • Isodiametric inequality. • Rademacher's theorem and Whitney's embedding theorem. • Surface- and cosurface formula. • Countable rectifiable sets, rectifiable varifolds.		
Special Objectives	Students have familiarised themselves with an important mathematical field that combines analysis and geometry and whose concepts and methods can be successfully applied to various problems. They have familiarised themselves with the basic concepts, results and methods of geometric measure theory and can successfully apply these methods in further courses.		
Literature	**Possible References :** • Lawrence C. Evans, Ronald F. Gariepy: Measure theory and fine properties of functions. CRC Press 1992. • Herbert Federer: Geometric measure theory. Springer 1969. • Leon Simon: Lectures on geometric measure theory. Australian National University 1984.		
Responsible Persons	Reiner Schätzle		

Course Title:	Introduction to Geometric Measure Theory – Measure Theoretic Methods
Specialisation	Analysis

Workload **- Time in Class** **- Self-Study**	Workload: 150 h	Time in Class: 45 h	Self-Study: 105 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 2 SWS + Exercise class 1 SWS		
Content	• Measures, covering theorems, differentiation of measures, Hausdorff measures and densities. • Isodiametric inequality. • Rademacher's theorem and Whitney's embedding theorem.		
Special Objectives	Students have familiarised themselves with an important mathematical field that combines analysis and geometry and whose concepts and methods can be successfully applied to various problems. They have familiarised themselves with the basic concepts, results and methods of geometric measure theory and can successfully apply these methods in further courses.		
Literature	**Possible References :** • Lawrence C. Evans, Ronald F. Gariepy: Measure theory and fine properties of functions. CRC Press 1992. • Herbert Federer: Geometric measure theory. Springer 1969. • Leon Simon: Lectures on geometric measure theory. Australian National University 1984.		
Responsible Persons	Reiner Schätzle		

Course Title:	Introduction to Geometric Measure Theory – Varifolds		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 150 h	Time in Class: 45 h	Self-Study: 105 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 2 SWS + Exercise class 1 SWS		
Content	• Surface- and cosurface formula. • Countable rectifiable sets, rectifiable varifolds.		
Special Objectives	Students have familiarised themselves with an important mathematical field that combines analysis and geometry and whose concepts and methods can be successfully applied to various problems. They have familiarised themselves with basic concepts, results and methods of geometric measure theory and can successfully apply these methods in further courses.

Responsible Persons	Reiner Schätzle

Course Title:	Introduction to Commutative Algebra and Algebraic Geometry		
Specialisation	Algebra		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	regularly in Winter Semester		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	• Rings and ideals. • Gröbner bases. • Localization. • Noetherian rings and modules. • Integral ring extensions. • Krull's principal ideal theorem and dimension theory. • Hilbert's Nullstellensatz and Noether normalisation. • Affine varieties, Zariski topology, morphisms.		
Special Objectives	The students have become familiar with the central concepts, results, and methods of commutative algebra and affine algebraic geometry. They have experienced the profound interplay between algebra and geometry through the example of affine varieties. Furthermore, the students understand how adopting a higher perspective - namely, abstracting the problem - enables the simultaneous treatment and resolution of seemingly unrelated questions.

Responsible Persons	Jürgen Hausen

Course Title:	Introduction to Partial Differential Equations		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	regularly		
Language of Instruction	English		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	• Harmonic functions. • Maximum principles. • Sobolev spaces. • L^2 theory. • Important examples (Laplace equation, wave equation, heat equation). • Fundamental solutions (elliptic situation). • Weak solutions of elliptic equations.		
Special Objectives	The students got to know a central branch of analysis, whose terms and methods are fundamental for many fields, like numerics or stochastics. Also evolutionary equations, who have strong connections to geometry, are issue of the lecture. The students are acquainted with central terms, results and methods of linear partial differential equations and are able to use these methods in advanced courses.		
Literature	**Possible References :** • Lawrence C. Evans: Partial differential equations. American Mathematical Society 2010. • David Gilbarg, Neil S. Trudinger: Elliptic partial differential equations of second order. Springer 2001. • Olga A. Ladyzenskaja, Vsevolod A. Solonnikov, Nina N. Responsible Persons	Gerhard Huisken, Reiner Schätzle

Course Title:	Introduction to Partial Differential Equations – Part 1		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 150 h	Time in Class: 45 h	Self-Study: 105 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 2 SWS + Exercise class 1 SWS		
Content	• Harmonic functions. • Maximum principles. • Sobolev spaces.		
Special Objectives	The students have familiarised themselves with the first basic features of a central area of analysis, the concepts and methods of which are fundamental for many other areas, such as numerics and stochastics. Students are familiar with the central concepts, results and methods of linear partial differential equations and can successfully apply these methods in the more advanced courses.		
Literature	**Possible References :** • Lawrence C. Evans: Partial differential equations. American Mathematical Society 2010. • David Gilbarg, Neil S. Trudinger: Elliptic partial differential equations of second order. Springer 2001. • Olga A. Ladyzenskaja, Vsevolod A. Solonnikov, Nina N. Uralceva: Linear and quasilinear equations of parabolic type. AMS 1968.		
Responsible Persons	Gerhard Huisken, Reiner Schätzle		

Course Title:	Elementary Number Theory		
Specialisation	Algebra		
Workload **- Time in Class** **- Self-Study**	Workload: 180 h	Time in Class: 60 h	Self-Study: 120 h
Frequency	not regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 2 SWS + Exercise class 2 SWS		

Content	• Divisibility in the integers. • Prime numbers. • Congruences. • Quadratic residues. • Arithmetic functions. • Multiplicative functions. • Classical theorems. • Applications.
Special Objectives	Students deepen their basic knowledge of integers and experience applying this knowledge to mathematical problems of various kinds.
Literature	**Possible References :** • Friedhelm Padberg: Elementare Zahlentheorie. Spektrum Akademischer Verlag 2001. • Stefan Mueller-Stach, J. Piontkowski: Elementare und algebraische Zahlentheorie. Vieweg 2006.
Responsible Persons	Victor Batyrev, Thomas Markwig

Course Title:	Functional Analysis		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	• Normed spaces, Banach spaces, dual spaces. • Hahn-Banach theorem, uniform boundedness principle. • Closed graph theorem, open mapping theorem, Banach-Alaoglu theorem. • Compact operators, normal operators, spectral theorems.		
Special Objectives	The students are aquainted with the basic principles and techniques of the theory of infinte dimensional spaces and can apply them to problems in analysis and geometry. They understand the complexity of problems of spectral theory and can use its results for the solution of analytical problems.		

Literature	**Possible References :** • Nicolas Bourbaki: Topological vector spaces. Springer 1987. • Adam Bowers, Nigel Dalton: An introductory course in functional analysis. Responsible Persons	Carla Cederbaum, Anton Deitmar, Gerhard Huisken, Reiner Schätzle

Course Title:	Geometry		
Specialisation	Geometry		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	regularly in Winter Semester		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	• Axiomatic foundation of planar geometry. • Euclidean and non-Euclidean geometry. • Parametrised curves and surfaces.		
Special Objectives	The students deepen their axiomatic way of thinking and are capable of giving correct proofs. They know the basic principles of geometry, are able to solve concrete problems and know the fundamental links between geometry and topology.		
Literature	**Possible References :** • Michele Audin: Geometry. Springer 2003. • Marcel Berger: Geometry Revealed: A Jacob's Ladder to Modern Higher Geometry. Springer 2010. • David A. Brannan, Matthew F. Esplen, Jeremy J. Gray: Geometry. Cambridge University Press 2012. • John Stillwell: The four pillars of geometry. Springer 2005.		

Responsible Persons	Christoph Bohle, Carla Cederbaum, Hannah Markwig, Ivo Radloff

Course Title:	Geometry of Manifolds 1		
Specialisation	Geometry		
Workload - Time in Class - Self-Study	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	• Manifolds and submanifolds. • Vector fields and flows. • Metrics, foundations of Riemannian geometry. • Complex structures. • Theorem of Gauß-Bonnet on surfaces.		
Special Objectives	The students know and understand the fundamental concepts of real and complex differential geometry and the basic techniques for handling them. Especially they have deepened their understanding of differential and integral calculus and have exemplarily experienced how mathematical concepts are used in a natural way in geometry.		
Literature	**Possible References :** • Sylvestre Gallot, Dominique Hulin, Jacques Lafontaine: Riemannian Geometry. Springer 2004. • John M. Lee: Introduction to Smooth Manifolds. Responsible Persons	Christoph Bohle, Frank Loose		

Course Title:	Geometry in Physics		
Specialisation	Mathematical Physics		
Workload - Time in Class - Self-Study	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	regularly in Winter Semester		
Language of Instruction	English		

Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS
Content	The module provides an introduction to fundamental methods of differential geometry and their relevance for physics. Particular topics are manifolds, differential forms, Riemannian metrics and associated notions of curvature, Riemannian geometry of submanifolds, real vector bundles, and connections. Applications of these concepts in Physics are discussed.
Special Objectives	Students obtain knowledge, understanding, and acquaintance with the use of the listed notions of differential geometry. They develop, in particular, a deeper understanding of differential and integral calculus and experience through examples how the mathematical notions are naturally applied within physical theories.
Literature	**Possible References :** • John Lee: Introduction to smooth manifolds. Springer 2012. • John Lee: Riemannian manifolds: An introduction. Springer 1997. • Chris Isham: Modern differential geometry for physicists. World Scientific 1999. • Mikio Nakahara: Geometry, Topology and Physics. IOP Publishing 2003.
Responsible Persons	Christoph Bohle, Carla Cederbaum, Stefan Teufel

Course Title:	Foundations of Discrete Mathematics		
Specialisation	Stochastics		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	not regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	• Logic. • Sets, relations, functions. • Partial orders. • Combinatorics. • Number theory. • Graph theory. • Algorithms and formal languages. • Discrete optimization.		
Special Objectives	Students have learned how to use basic methods of discrete mathematics. They can analyze discrete structures and identify discrete structures in different contexts.		

Literature	**Possible References :** • Ronald Graham, Donald Knuth, Oren Patashnik: Concrete Mathematics. Addison-Wesley 1994. • Kenneth H. Rosen: Discrete Mathematics and Its Application. McGraw-Hill 2019. • Ralph P. Grimaldi: Discrete and Combinatorial Mathematics. Addison-Wesley 2004. • Norman L. Biggs: Discrete Mathematics. Oxford University Press 2002.
Responsible Persons	Martin Möhle, Martin Zerner, Elmar Teufl

Course Title:	Hyperbolic Geometry: Axiomatic, Reflection Geometric, Algebraic		
Specialisation	Geometry		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	not regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	Starting from a system of axioms for plane absolute geometry with the basic concepts of incidence and congruence, the associated Bachmann reflection geometry is developed. After the introduction of the hyperbolic axiom, this is continued with reflection-geometric end theory. A Euclidean field is created from the rotations around an end and the translations along a straight line, with the help of which the hyperbolic plane under consideration is described algebraically.		
Special Objectives	The students have learnt to look at one and the same mathematical object (in this case absolute and hyperbolic planes) from completely different perspectives and to link them together. In particular, they have learnt about Bachmann's group-theoretically oriented reflection geometry, which rarely appears in the curriculum, and thus deepen their knowledge of groups. They also deepened their knowledge about the interweaving of geometry and algebra.		
Literature	**Possible References :** • Friedrich Bachmann: Aufbau der Geometrie aus dem Spiegelungsbegriff. Springer 1959. • Robin Hartshorne: Geometry: Euclid and beyond. Springer 2000. • Helmut Karzel, Kay Sörensen, Dirk Windelberg: Einführung in die Geometrie. Vandenhoeck und Ruprecht 1973.		
Responsible Persons	Hermann Hähl, Hannah Markwig		

Course Title:	Commutative Algebra
Specialisation	Algebra

Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	regularly in Winter Semester		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	• Rings and Ideals. • Localisation and local rings. • Noetherian and Artinian rings and modules. • Integral ring extensions and Cohen-Seidenberg theorems. • Krull's principal ideal theorem and dimension theory. • Primary decomposition. • Normality, regularity and discrete valuation rings. • Hilbert's Nullstellensatz and Noether normalisation.		
Special Objectives	The students are familiar with and understand the language and methods of commutative algebra, which are essential for studying the fields of algebra, geometry, and number theory. They recognise how adopting a higher perspective - namely, abstracting the problem - enables the simultaneous treatment and resolution of seemingly unrelated questions.		
Literature	**Possible References :** • Michael Francis Atiyah, Ian G. Macdonald: Introduction to commutative algebra. Addison Wesley 1969. • David A. Cox, John B. Little, Donal O'Shea: Ideals, varieties, and algorithms. Springer 2008. • David Eisenbud: Commutative algebra with a view toward algebraic geometry. Springer 1995. • Ernst Kunz: Einführung in die kommutative Algebra und algebraische Geometrie. Vieweg 1980. • Miles Reid: Undergraduate Commutative Algebra. Cambridge University Press 1997.		
Responsible Persons	Victor Batyrev, Thomas Markwig		

Course Title:	Convex Geometry		
Specialisation	Geometry		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	not regularly		
Language of Instruction	German or English		

Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS
Content	• Cones, polytopes, polyhedra, fans, polyedral complexes. • Normal fans of polygons. • Triangulations, subdivisions, secondary fans, discriminants.
Special Objectives	In the lecture the students learn basic terms, results and methods of convex geometry. They develope a deepened understanding for the concept of duality of mathematical objects on the example of polytopes and fans. Furthermore they enhance their geometric view and their spatial sense.
Literature	**Possible References :** • Günter M. Ziegler: Lectures on Polytopes. Springer 1998.
Responsible Persons	Hannah Markwig

Course Title:	Cryptography		
Specialisation	Algebra		
Workload **- Time in Class** **- Self-Study**	Workload: 150 h	Time in Class: 45 h	Self-Study: 105 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 2 SWS + Exercise class 1 SWS		
Content	• Brief review of key concepts and results from algebra and number theory. • Historical ciphers and their cryptanalysis (Caesar, Vigenere, substitution); encryption schemes. • Diffie-Hellman protocol and fast exponentiation. • Discrete logarithms: Shanks' algorithm and Pollard's rho method. • RSA: correctness, security, and attacks. • Signature schemes.		
Special Objectives	Students are familiar with the fundamental concepts and results of elementary number theory and algebra, as well as their application in cryptography. They can implement the methods covered in Python or SageMath in an exemplary manner and know what to pay attention to. Using classical ciphers, they understand typical strengths and weaknesses; they master the Diffie-Hellman protocol and are familiar with the man-in-the-middle attack. They can compute discrete logarithms in cyclic groups, understand the RSA scheme, and are able to interpret the recommendations of the Federal Office for Information Security (BSI). In various attack scenarios, they can identify weaknesses of RSA when the requisite conditions are not met. By engaging with numerous open problems in cryptography – whose solution approaches can, perhaps surprisingly, stem from very different areas of mathematics – students practise critical thinking. The exercises are central and support students in working independently and in a practice-oriented way, especially with CAS systems such as SageMath.

Course Title:	Lie Groups		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		
Content	• Manifolds and Lie groups, • Lie algebras and exponential map, • Covering spaces and classification of Lie groups by their Lie algebras, • Classical Lie groups, • Operations of Lie groups and homogeneous spaces.		
Special Objectives	Lie groups lie at the interface between geometry, algebra and analysis. They are suitable for describing the symmetries of geometric objects, but also algebraic equations or solutions of differential equations, in particular if these symmetries form a continuous set. The students learn from a prominent example how different disciplines of mathematics can work together very successfully and how a convincing formalism is developed that can precisely describe a variety of symmetry phenomena.

Responsible Persons	Anton Deitmar, Frank Loose		

Course Title:	Linear Control Theory		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 180 h	Time in Class: 60 h	Self-Study: 120 h
Frequency	not regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 2 SWS + Exercise class 2 SWS		
Content	Mathematical methods are indispensable for the management and control of complex systems and processes. The underlying theory is not only fascinating due to its diverse applications, but also, in its abstract form, due to the clarity and elegance of its methods and results. In this lecture, finite-dimensional systems are dealt with first, for which a good knowledge of analysis and linear algebra is sufficient. The aims are Kalman's controllability criterion and the resulting criteria for stabilisability. If there is enough time, we will extend the theory to infinite-dimensional systems. In the exercise classes we will apply the theory to concrete examples.		
Special Objectives	Students have learnt basic methods of linear control theory. At the same time, they have experienced and understood the interaction of various theoretical concepts from linear algebra and analysis and their benefits for specific applications.		
Literature	**Possible References :** • Hans Wilhelm Knobloch, Huibert Kwakernaak: Lineare Kontrolltheorie. Springer 1985. • Jerzy Zabczyk: Mathematical Control Theory. Birkhäuser 1992. • Ruth F. Curtain, Hans Zwart: An Introduction to Infinite-Dimensional Systems Theory. Springer 1995.		
Responsible Persons	Rainer Nagel		

Course Title:	Non-Linear Optimisation		
Specialisation	Scientific Computing		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS		

Content	• Finite-dimensional optimisation, gradient method with Armijo's rule, globalised Newton method. • Restricted optimisation, Farkas' lemma, tangent cone. • Abadie CQ, KKT conditions, Slater conditions. • Linear programme, duality, simplex method. • Penalty and barrier methods, interior point method. • Nonlinear programs, SQP methods, non-smooth optimisation.
Special Objectives	Students master the basic principles and techniques of analysis and numerics of constrained optimisation problems.
Literature	**Possible References :** • Carl Geiger, Christian Kanzow: Theorie und Numerik restringierter Optimierungsaufgaben. Springer 2002.
Responsible Persons	Andreas Prohl

Course Title:	Software Obfuscation: Mixed Boolean-Arithmetic Expressions		
Specialisation	Algebra		
Workload **- Time in Class** **- Self-Study**	Workload: 150 h	Time in Class: 45 h	Self-Study: 105 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 2 SWS + Exercise class 1 SWS		
Content	• What is software obfuscation and what is it used for? What techniques are there, and why is deobfuscation so difficult? What does a reverse engineer do? Introductory examples. • Mathematical foundations: ideals in $\mathbb{Z}$, greatest common divisor, Euclidean algorithm, time complexity estimates, rings and fields, computations in residue class rings, permutations, matrices and determinants, linear algebra over rings. • Boolean algebras and Boolean functions. • Fundamentals of mixed Boolean-arithmetic expressions (MBA). • Obfuscation using MBAs and permutation polynomials. • Deobfuscation using MBAs; analysis and comparison of state-of-the-art tools and their weaknesses. • Deobfuscation using program synthesis.		
Special Objectives	The students are familiar with initial techniques in the field of software obfuscation and deobfuscation and understand the mathematical results required for this. They are able to apply these confidently.		

Literature	**Possible References :** • Yongxin Zhou, Andrew Main, Yuxin Gu, Harrison Johnson. Information Hiding in Software with Mixed Boolean-Arithmetic Transforms. In: International Workshop on Information Security Applications (WISA). Springer, 2007, pp. 6175. • Bernhard Reichenwallner, Peter Meerwald-Stadler. Ecient Deobfuscation of Linear Mixed Boolean-Arithmetic Expressions. In: Proceedings of the 15th ACM Workshop on Articial Intelligence and Security (AISec 2022). ACM, 2022, pp. 119130.
Responsible Persons	Thomas Markwig

Course Title:	Topology		
Specialisation	Geometry		
Workload **- Time in Class** **- Self-Study**	Workload: 180 h	Time in Class: 60 h	Self-Study: 120 h
Frequency	not regularly		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 2 SWS + Exercise class 2 SWS		
Content	• Review of metric spaces: closed sets, environment, continuity, complete metric spaces, compactness in metric spaces metric spaces. • Set-theoretic topology: topological spaces, continuity convergence, compactness, separation axioms. • Spaces of continuous functions: Urysohn's lemma and applications, Stone-Cech compactification, the theorem of Stone-Weierstraß, notions of convergence in functions, compactness in spaces of functions. • Baire's spaces and application of Baire's theory: Baire's function classes, existence theorems. • Outlook on algebraic topology.		
Special Objectives	Students have familiarised themselves with the central concepts, results and methods of set-theoretical topology and have understood that this theory can be used to describe many phenomena in different areas of mathematics. In this way, they link their knowledge of very different areas of mathematics.		
Literature	**Possible References :** • Felix Hausdorff: Grundzüge der Mengenlehre. Von Veit & Comp. 1914. • Boto von Querenburg: Mengentheoretische Topologie. Springer 2001. • Volker Runde: A Taste of Topology. Springer 2005.		
Responsible Persons	Rainer Nagel		

Course Title:	Calculus of Variations		
Specialisation	Analysis		
Workload **- Time in Class** **- Self-Study**	Workload: 150 h	Time in Class: 45 h	Self-Study: 105 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 2 SWS + Exercise class 1 SWS		
Content	• Direct method of calculus of variations. • Euler-Lagrange equations. • Palais-Smale condition. • Mountain-Pass Lemma according to Ambrosetti-Rabinowitz.		
Special Objectives	In the first part of the course, students have learnt the direct method of calculus of variations, which is primarily used to prove the existence of weak solutions of partial differential equations, but also has applications in e.g. differential geometry. They have also acquired the necessary basics from functional analysis and partial differential equations and can also use these in a different context, e.g. geometric analysis. In the second part of the course, students learnt about a so-called mountain-pass lemma. With its help, they can analyse non-uniqueness in the existence of solutions of partial differential equations.		
Literature	**Possible References :** • Michael Struwe: Variational Methods, Springer 2008. • David Gilbarg, Neil S. Trudinger: Elliptic Partial Differential Equations of Second Order, Springer 1998. • Walter Rudin: Functional Analysis, Mc Graw Hill Education 1991.		
Responsible Persons	Reiner Schätzle		

Course Title:	Probability Theory		
Specialisation	Stochastics		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	regularly in Winter Semester		
Language of Instruction	German		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		

Content	• Characteristic functions and additions to the central limit theorem. • Conditional expectations and further measure-theoretic foundations. • Markov chains and martingales in discrete time, classification, asymptotic behaviour, stopping times, stationarity, ergodicity. • Introduction to processes in contiuous time like Poisson processes and Brownian motion.
Special Objectives	The students got to know the central terms results and methods of probability theory. They can model, analyse and interprete stochastic dependency structures of random quantities in a measure theoretically founded manner. The students are capable of naming and proving the central results of the lecture as well as assessing and explaining the presented connections.
Literature	**Possible References :** • Heinz Bauer: Wahrscheinlichkeitstheorie und Grundzüge der Maßtheorie. De Gruyter 2010. • Richard Durrett: Probability, Theory and Examples. Responsible Persons	Martin Möhle, Martin Zerner

Course Title:	Number Theory and Cryptography		
Specialisation	Algebra		
Workload **- Time in Class** **- Self-Study**	Workload: 270 h	Time in Class: 90 h	Self-Study: 180 h
Frequency	not regularly		
Language of Instruction	German or English		
Forms of Teaching and Learning	Lecture 4 SWS + Exercise class 2 SWS		

Content	• RSA cryptosystem, primality tests, AKS algorithm. • Factorisation methods, number field sieve. • Quadratic reciprocity in cryptography. • Evaluation of the discrete logarithm. • Dynamical systems and Pollard's rho algorithm. • Elliptic curve cryptography. • Lattices and post-quantum cryptography. • Zero-knowledge proofs, digital signatures and hash functions.
Special Objectives	The students know the basic concepts of elementary number theory and their applications in cryptography. They have deepened and extended their knowledge about neighbouring disciplines: They encounter methods of the theory of dynamical systems and become acquainted with elliptic curves over finite fields. They understand how fundamental cryptographic protocolls are working. Through studying many open problems of crytography, whose solutions may suprisingly come from most distinct branches of mathematics, the students learn to think critically.

4.2 Approved Course Combinations — Linking horizontally

The pairs of courses listed below from the course catalogue in 4.1 can be combined in the module Linking of Mathematical Areas (MAT-30-03) in order to study introductory aspects of different but related topics, thus broadening the knowledge on a particular topic. Additional combinations can be approved upon written application to the head of the examination board.

- Algebraic Topology 1; Introduction to Commutative Algebra and Algebraic Geometry
- Algebraic Topology 1; Geometry
- Algebraic Topology 1; Geometry of Manifolds 1
- Algebraic Topology 1; Geometry in Physics
- Algebraic Topology 1; Hyperbolic Geometry: Axiomatic, Reflection Geometric, Algebraic
- Algebraic Topology 1; Commutative Algebra
- Algebraic Topology 1; Convex Geometry
- Algebraic Topology 1; Lie Groups
- Algebraic Topology 1; Topology
- Algorithms of Numerical Mathematics; Introduction to Mathematical Physics
- Algorithms of Numerical Mathematics; Functional Analysis
- Algorithms of Numerical Mathematics; Convex Geometry

4.3 Approved Course Combinations — Linking in depth

The pairs of courses listed below from the course catalogue in 4.1 and from the module handbook of the Master of Science in Mathematics can be combined in the module Linking of Mathematical Areas (MAT-30-03) in order to deepen the knowledge on a topic beiond the introductory level. Additional combinations can be approved upon written application to the head of the examination board.

- Algebraic Topology 1; Algebraic topology 2

- Algebraic Topology 1; Graph Theory
- Algebraic Topology 1; Cohomology and sheaves
- Algebraic Number Theory; Elliptic Functions and Elliptic Curves
- Algorithms of Numerical Mathematics; Convex Analysis and Optimisation
- Algorithms of Numerical Mathematics; Ordinary Differential Equations - Analysis and Numerics
- Algorithms of Numerical Mathematics; Numerics of Stationary Differential Equations
- Dynamical Systems; Ordinary Differential Equations - Analysis and Numerics
- Dynamical Systems; Operator Theory
- Introduction to Dynamical Systems; Introduction to Integrable Systems (Classical Mechanics, Riemann Surfaces, and Spectral Theory)
- Introduction to Geometric Measure Theory; Geometric Measure Theory
- Introduction to Geometric Measure Theory – Measure Theoretic Methods; Geometric Measure Theory
- Introduction to Commutative Algebra and Algebraic Geometry; Algebraic Geometry
- Introduction to Commutative Algebra and Algebraic Geometry; Algebraic Geometry and Toric Varieties
- Introduction to Commutative Algebra and Algebraic Geometry; Algebraic Groups
- Introduction to Commutative Algebra and Algebraic Geometry; Algebraic Curves
- Introduction to Commutative Algebra and Algebraic Geometry; Elliptic Functions and Elliptic Curves
- Introduction to Commutative Algebra and Algebraic Geometry; Cohomology and sheaves
- Introduction to Commutative Algebra and Algebraic Geometry; Toric geometry
- Introduction to Commutative Algebra and Algebraic Geometry; Toric Varieties and Mori Dream Spaces
- Introduction to Commutative Algebra and Algebraic Geometry; Tropical Geometry
- Introduction to Mathematical Physics; Foundations of Quantum Mechanics
- Introduction to Mathematical Physics; Geometry of Manifolds 1
- Introduction to Mathematical Physics; Geometry in Physics
- Introduction to Mathematical Physics; Ordinary Differential Equations - Analysis and Numerics
- Introduction to Mathematical Physics; Operator Theory
- Introduction to Partial Differential Equations; The Ricci flow of Riemannian metrics

- Introduction to Partial Differential Equations; Geometric Variation Problems
- Introduction to Partial Differential Equations; Ordinary Differential Equations - Analysis and Numerics
- Introduction to Partial Differential Equations; Introduction to Integrable Systems (Classical Mechanics, Riemann Surfaces, and Spectral Theory)
- Introduction to Partial Differential Equations; Non-Linear Elliptic and Parabolic Partial Differential Equations
- Introduction to Partial Differential Equations; Operator Theory
- Introduction to Partial Differential Equations; Partial Differential Equations
- Elementary Number Theory; Introduction to Analytic Number Theory
- Functional Analysis; Introduction to Harmonic Analysis
- Functional Analysis; Ergodic Theory
- Functional Analysis; Ordinary Differential Equations - Analysis and Numerics
- Functional Analysis; Harmonic Analysis on Abelian Groups
- Functional Analysis; Control Theory
- Functional Analysis; Mathematical Quantum Theory
- Functional Analysis; Non-Commutative Ergodic Theory
- Functional Analysis; Operator Algebras
- Functional Analysis; Operator Theory
- Functional Analysis; Optimisation with Differential Equations
- Functional Analysis; Spectral theory of positive operators
- Geometry; Algebraic Geometry
- Geometry; Algebraic Geometry and Toric Varieties
- Geometry; Algebraic Curves
- Geometry; Elliptic Functions and Elliptic Curves
- Geometry; Graph Theory
- Geometry; Cohomology and sheaves
- Geometry; Toric geometry
- Geometry; Toric Varieties and Mori Dream Spaces
- Geometry; Tropical Geometry

- Geometry of Manifolds 1; Algebraic Geometry
- Geometry of Manifolds 1; The Ricci flow of Riemannian metrics
- Geometry of Manifolds 1; Foundations of Quantum Mechanics
- Geometry of Manifolds 1; Geometry of Manifolds 2
- Geometry of Manifolds 1; Introduction to Integrable Systems (Classical Mechanics, Riemann Surfaces, and Spectral Theory)
- Geometry of Manifolds 1; Cohomology and sheaves
- Geometry of Manifolds 1; Mathematical Relativity
- Geometry in Physics; Algebraic Geometry
- Geometry in Physics; The Ricci flow of Riemannian metrics
- Geometry in Physics; Foundations of Quantum Mechanics
- Geometry in Physics; Introduction to Integrable Systems (Classical Mechanics, Riemann Surfaces, and Spectral Theory)
- Geometry in Physics; Cohomology and sheaves
- Geometry in Physics; Mathematical Quantum Theory
- Geometry in Physics; Mathematical Relativity
- Geometry in Physics; Mathematical Statistical Physics
- Combinatorics; Graph Theory
- Commutative Algebra; Algebraic Geometry
- Commutative Algebra; Algebraic Geometry and Toric Varieties
- Commutative Algebra; Algebraic Groups
- Commutative Algebra; Algebraic Curves
- Commutative Algebra; Computer Algebra
- Commutative Algebra; Elliptic Functions and Elliptic Curves
- Commutative Algebra; Cohomology and sheaves
- Commutative Algebra; Toric geometry
- Commutative Algebra; Toric Varieties and Mori Dream Spaces
- Commutative Algebra; Tropical Geometry
- Convex Geometry; Algebraic Geometry
- Convex Geometry; Convex Analysis and Optimisation

- Convex Geometry; Elliptic Functions and Elliptic Curves
- Convex Geometry; Graph Theory
- Convex Geometry; Cohomology and sheaves
- Convex Geometry; Toric geometry
- Convex Geometry; Toric Varieties and Mori Dream Spaces
- Convex Geometry; Tropical Geometry
- Lie Groups; Elliptic Functions and Elliptic Curves
- Lie Groups; Groups and Representations
- Lie Groups; Cohomology and sheaves
- Linear Control Theory; Control Theory
- Non-Linear Optimisation; Convex Analysis and Optimisation
- Non-Linear Optimisation; Ordinary Differential Equations - Analysis and Numerics
- Topology; Elliptic Functions and Elliptic Curves
- Topology; Cohomology and sheaves
- Probability Theory; Graph Theory
- Probability Theory; Markov Chains and Applications
- Probability Theory; Mathematical Population Genetics
- Probability Theory; Mathematical Statistics
- Probability Theory; Numerics of Stochastic Differential Equations
- Probability Theory; Percolation Theory
- Probability Theory; Point Processes
- Probability Theory; Stochastic Differential Equations
- Probability Theory; Stochastic Processes
- Number Theory and Cryptography; Algebraic Geometry
- Number Theory and Cryptography; Algebraic Number Theory
- Number Theory and Cryptography; Introduction to Analytic Number Theory
- Number Theory and Cryptography; Elliptic Functions and Elliptic Curves

4.4 Excluded Course Combinations

The pairs of courses listed below from the course catalogue in 4.1 cannot be included simultaneously in modules of the Bachelor of Science in Mathematics programme due to significant content overlaps.

- Algebraic Geometry; Algebraic Geometry and Toric Varieties
- Algebraic Geometry; Algebraic Geometry and Toric Varieties
- Algebraic Groups; Algebraic Transformation Groups
- Algebraic Topology 1; Dynamical Systems
- Representation Theory of Finite Groups; Groups and Representations
- Representation Theory of Finite Groups; Groups and Representations
- Dynamical Systems; Introduction to Dynamical Systems
- Introduction to Geometric Measure Theory; Introduction to Geometric Measure Theory – Measure Theoretic Methods
- Introduction to Geometric Measure Theory; Introduction to Geometric Measure Theory – Measure Theoretic Methods
- Introduction to Geometric Measure Theory; Introduction to Geometric Measure Theory – Varifolds
- Introduction to Geometric Measure Theory; Introduction to Geometric Measure Theory – Varifolds
- Introduction to Commutative Algebra and Algebraic Geometry; Commutative Algebra
- Introduction to Commutative Algebra and Algebraic Geometry; Commutative Algebra
- Geometry of Manifolds 1; Geometry in Physics
- Geometry of Manifolds 1; Geometry in Physics
- Geometric Measure Theory; Geometric Measure Theory – Flows
- Geometric Measure Theory; Geometric Measure Theory – Flows
- Geometric Measure Theory; Geometric Measure Theory – Varifolds
- Geometric Measure Theory; Geometric Measure Theory – Varifolds
- Number Theory and Cryptography; Elliptic Curves and Cryptography
- Number Theory and Cryptography; Elliptic Curves and Cryptography

5 Information on the Programmes Offered by Other Departments for the Elective Specialisation

In the section Elective Specialisation, modules can be taken from the range of a variety of degree programmes from other subject areas. The structure of the degree programme suggests that students should already take courses in the Elective Specialisation in the first semester. With the great freedom of choice that the study programme offers, it is not easy to get an overview of what is available. In the following, we would therefore like to provide an initial overview of the most frequently chosen subjects to show which modules are useful for entering the respective subject and are generally open to mathematics students. We will also indicate where further information can be found for the respective subjects. We would also like to point out that the information is given without guarantee and that, in case of doubt, the information in the module handbooks of the respective study programmes always applies.

5.1 Biology

In Biology, modules from the study programme B.Sc. Biology can be included. The provisions of the information sheet *Requirements for Minor Subject Students in Biology* apply. We list here the essential modules of the first two years of study:

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
Bio101	Biomolecules of the Cell	L+E	6	4	WS	none
Bio115	Ethics	L+S	6	4	WS	none
Bio121	Structure and Function of Plants and Animals	L+E	6	4	WS	Bio101
Bio104	Botany	L+E	6	4	SS	Bio101+121
Bio122	Zoology	L+E	6	4	SS	Bio101+121
Bio111	Molecular Biology 1 (Cell Biology, Genetics)	L+E	9	6	WS	Bio101+121
Bio126	Molecular Biology 2 (Microbiology, Plant Physiology)	L+E	12	8	WS	Bio101+121
Bio125	Animal Physiology	L+E	9	6	WS+SS	Bio101+121
Bio127	Ecology and Biodiversity 1	L+E	9	6	SS	Bio101+121 +104+122
Bio128	Ecology and Biodiversity 2	L+E	9	6	SS	Bio101+121 +104+122

Further information can be found under the following links:

- Link to the module handbook:
  https://uni-tuebingen.de/de/8520
- Link to the information sheets:
  https://uni-tuebingen.de/de/11717
- Link to the Faculty Course Advisor:
  https://uni-tuebingen.de/de/16190

5.2 Biochemistry

In Biochemistry, only the sub-modules listed below from the B.Sc. Biochemistry study programme can be included. If you would like to take these modules, you should contact the Faculty Course Advisor for the Bachelor of Science Mathematics programme in advance. It is also necessary to register with the Faculty Course Advisor for the Bachelor of Science in Biochemistry, Dr Elisabeth Fuss, at least 6 weeks before the start of the course. Each semester, a maximum of 3 mathematics students can can participate in the biochemistry programme.

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
1	Biochemistry I (only lecture + exercises, not the practical course; grade by written exam)	L+E	8	6	WS	none
6	Biochemistry II (only lecture with seminar, not the practical course with seminar; grade by written exam)	L+S	7	3,5	SS	Biochemsitry I
8b	Biochemistry IV (complete module)	L+S	5	3,5	SS	Biochemistry I+II

Further information can be found under the following links:

- Link to the module handbook:
  https://uni-tuebingen.de/de/45014
- Link to the Faculty Course Advisor
  https://uni-tuebingen.de/de/45023

5.3 Chemistry

In Chemistry, modules from the B.Sc. Chemistry study programme or the B.Sc. Physics in Chemistry study programme or the B.Sc. Molecular Medicine in Chemistry study programme can be included. The modules listed below are particularly suitable:

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
AL	General Chemistry	L	5	4	WS	none
AC0020 + AC0021 + AC0022	General and Inorganic Chemistry for Scientists	L+Pr+T	6	3	WS	none
OC0100 + OC0005 + OC0101	Organic Chemistry for Scientists	L+Pr+T	6	3	WS	none
PC0260	Physicochemical basics for Biochemists, Biologists, Computer Scientists and Mathematicians	L+E	6	5	SS	none
PC0310 + PC2360 + PC2005	Physical Chemistry for Bioinformaticians, Trainee Teachers and Scientists	L+E	6	5	WS	none
PC1a	Physical Chemistry 1a	L+E	4	3	SS	none
PC1b	Physical Chemistry 1b	L+E	4	3	WS	PC1a
TC1	Theoretical Chemistry 1 (Quantum Mechanics)	L+E	3	3	SS	PC1a+PC1b
TC2	Theoretical Chemistry2 (Quantum Chemistry)	L+E	3	3	WS	TC1

Further information can be found under the following links:

- Link to the module handbooks:
  https://uni-tuebingen.de/de/23121
  https://uni-tuebingen.de/de/3558
  http://www.medizin.uni-tuebingen.de/Studierende/Molekulare+Medizin/Bachelorstudiengang+_Molekulare+Medizin_-port-10011-p-9414.html
- Link to the Faculty Course Advisor:
  https://uni-tuebingen.de/de/139742

5.4 Geography

In Geography, modules from the study programme B.Sc. Geography can be included. The modules listed below are suitable as an introduction to the subject:

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
Geo 13	Fundamentals of Geography	L+E	6	4	WS	none

Further information can be found under the following links:

- Link to the module handbooks:
  https://uni-tuebingen.de/de/83983

- Link to the Faculty Course Advisor:
  https://uni-tuebingen.de/de/84701

5.5 Geosciences

In Geosciences, modules from the B.Sc. Geosciences study programme can be included; admission to further modules may be decided by the respective module coordinator.

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
B104	Introduction to the Geosciences	L+E	6	6	WS	none
B106/B206	Minerals and Petrology	L+E+L	6	5	WS+SS	B104
B301	Hydrology and Water Chemistry	L+E	6	6	WS	none
B304	Palaeontology	L+E	6	6	WS	B104 + B203
B305	Geochemistry	L	6	6	WS	B104 + Chemistry
B401	Sediments and Stratigraphy	L+L+L+E	6	6	SS	B104
B408	Geophysics	L+E	6	6	SS	Physics

Further information can be found under the following links:

- Link to the module handbooks:
  https://uni-tuebingen.de/de/96187
- Link to the Faculty Course Advisor:
  https://uni-tuebingen.de/de/84701

5.6 Computer Science

In Computer Science, in addition to the module MAT-00-20 *Computer Science for Mathematicians*, modules from the study programmes B.Sc. Computer Science, B.Sc. Computer Science as a minor subject, B.Sc. Media Computer Science and the M.Sc. Computer Science programme can be included. The modules listed below are particularly suitable, although module INFM1110 cannot be taken together with the module MAT-00-20 *Computer Science for mathematicians*:

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
MAT-00-20	Computer Science for Mathematicians (see page 91)	L+E	9	6	SS	none
INFM1110	Practical Computer Science 1: Declarative Programming	L+E	9	6	WS	none

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
INFM1120	Practical Computer Science 2: Imperative and Object-orientated Programming	L+E	9	6	SS	none
INFM1310	Computer Engineering 1: Digital Technology	L+E	6	4	WS	none
INFM2310	Computer Engineering 2: Computer Science of Systems	L+E	9	6	SS	none
INFM2420	Theoretical Computer Science 1: Algorithms and Data Structures	L+E	9	6	WS	INFM1110, INFM1120
INFM2410	Theoretical computer science 2: Formal Languages, Computability and Complexity	L+E	9	6	SS	none
part of INFM2620	Logic (as a minor subject in the B.Sc. Computer Science study programme)	L	2	3	SS	INFM1110
MEINFM2101	Introduction to Media Studies	L+E	6	4	WS	none
MEINFM3164	User Experience	L+E	6	4	SS	none
MEINFM3171	Introduction to Internet Technologies	L+E	6	4	irregular	none
MEINFM3321	Fundamentals of Multimedia Technology	L+E	6	4	WS	none

Further information on the study programmes in Computer Science can be found under the following links:

5.7 Cognitive Science

The B.Sc. Cognitive Science study programme is an interdisciplinary study programme offered by the departments of Computer Science and Psychology. In addition to the modules from Computer Science and Psychology, the following modules can also be included, with INF1880 being a module from the B.Sc. Computer Science (for links see above under Computer Science):

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
KOGM1210	Conceptual and Neurobiological Fundamentals of Cognitive Science	L+L	6	4	WS	none
KOGM2210	Experimental Cognitive Science	S	6	4	WS	KOGM1210 + KOGM1220
KOGM2220	Cognitive Architectures	L+E	6	4	SS	KOGM1220
KOGM3410	Computational Neuroscience	L+E	6	4	WS	none
KOGM2510	Linguistics (for Cognitive Scientists, only submodule)	L	6	4	WS	none
INFM1110	Practical Computer Science 1: Declarative Programming	L+E	9	6	WS	none
INFM1120	Practical Computer Science 2: Imperative and Object-oriented Programming	L+E	9	6	SS	INFM1110

Further information on the Cognitive Science study programme can be found under the following links:

  https://uni-tuebingen.de/de/74348
- Link to the Faculty Course Advisor:
  https://uni-tuebingen.de/de/74360

5.8 Philosophy

In Philosophy, modules from the study programme B.A. Philosophy degree programme can be included. The module listed below is the introductory module to the study programme:

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
PHI-BA-01	Introduction to Philosophy Part 1: Introduction to Formal Logic Part 2: Introduction to Philosophy	L+L/S	12	4	WS	none

Further information can be found under the following links:

- Link to the module handbook:
  https://uni-tuebingen.de/de/128277
- Link to the Faculty Course Advisor:
  https://uni-tuebingen.de/de/196805

5.9 Physics

In Physics, modules from the B.Sc. Physics study programme can be can be included. The modules listed below are particularly suitable:

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
PGK1	Physics Basic Course 1 (Mechanics and Thermodynamics)	L+E	12	9	WS	none
PGK2	Physics Basic Course 2 (Electromagnetism)	L+E	12	9	SS	none
PGKAM	Physics Basic Course - Analytical Mechanics	L+E	6	6	WS	PGK1 + PGK2
PGKOP	Physics Basic Course - Optics	L+E	6	4	WS	PGK1 + PGK2
PP1	Physics Laboratory 1	Pr	6	-	WS/SS	PGK1
BMEPAAP	Astronomy and Astrophysics	L+E	6	6	SS	PGK1+2 + PGKAM + PGKOP
BMEPAML	Atoms, Molecules and Light	L+E	6	6	SS	PGK1+2 + PGKAM + PGKOP
BMEPKM	Condensed Matter	L+E	6	6	WS	PGK1+2 + PGKAM + PGKOP
BMEPKTP	Nuclear and Particle Physics	L+E	6	6	WS	PGK1+2 + PGKAM + PGKOP
BMEPPN	Physics of Nanostructures	L+E	6	6	SS	PGK1+2 + PGKAM + PGKOP
BMTPQM	Quantum Mechanics	L+E	12	7	SS	PGK1+2 + PGKAM + PGKOP
BMTPTDS	Thermodynamics and Statistics	L+E	6	6	WS	PGK1+2 + PGKAM + PGKOP
BMTPKFT	Classical Field Theory	L+E	6	6	SS	PGK1+2 + PGKAM + PGKOP

Further information can be found under the following links:

- Link to the module handbook:
  https://uni-tuebingen.de/de/3558

- Link to the Faculty Course Advisor:
  https://uni-tuebingen.de/de/3541

5.10 Psychology

In Psychology, modules from the Psychology study programme can be taken as a compulsory elective subject (*minor subject*). These are listed here and in the information sheet *Psychology for Students of Other Subjects* on the website of the Department of Psychology. The regulations listed in the information sheet *Psychology for Students of Other Subjects* apply. Information on the content of the lectures can also be found in the information sheet.

Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
Introduction to Psychology II	V	3	2	WS	none
Introduction to Psychology III	V	3	2	SS	none
Introduction to Psychology IIII	V	3	2	WS	none
Introduction to Psychology IIV	V	3	2	SS	none

Further information can be found under the following links:

- Link to the information sheet:
  https://uni-tuebingen.de/de/15980
- Link to the Faculty Course Advisor:
  https://uni-tuebingen.de/de/21976

5.11 Business and Economics

In Economics, modules can be chosen from the range offered by the department for the minor subject of economics and business administration. The regulations of the *Study Programme Minor in Economics* published on the websites listed below apply, which contains a complete list of the modules offered as well as further regulations. It should be noted that the modules *S100 Mathematical Methods in Economics*, *S111 Probability and Risk* and *S220 Quantitative Methods of Methods of Economics* are **not** applicable.

Only the modules that are suitable for beginners are listed here, although it is generally recommended to start with one of the two modules L100 or B110.

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
L100	Introduction to Business Administration for Students studying to become teachersor and Minor Subject students	L+E	6	3	WS	none

Number	Module Title	Type of Course	ECTS	SWS	Rotation	Prerequis.
B110	Introduction to Business Administration	L+E	6	4	WS	none
B130	Internal Accounting	L+E	6	4	SS	none
B180	Technology of Operational Accounting	L+E	6	4	WS	none
E130	Macroeconomics	L+E	6	5	SS	none
E170	Microeconomics	L+E	9	5	SS	none
